- Compare average processing time for billing, fee collection, cost recovery, and revenue recognition before and after new system implementation;
- 4. Evaluate and report effectiveness of online fee collection and cost recovery process; and
- Assess project cost-effectiveness by documenting achieved benefits and improvements compared to development costs.Subdivision Permitting Application and Review
- 1. Identify "as is" processes and establish a timeline for completion of work flow documentation for each process within project scope. Provide project owner with monthly reports comparing work progress to scheduled time line:
- 2. Schedule conversion and implementation of standard processes for identified systems;
- 3. Compare incidence of incomplete and deficient applications requiring multiple reviews and repeat correspondence before and after new system implementation;
- 4. Compare number and types of complaints before and after new system implementation;
- 5. Compare average permit handling time before and after implementation of improvements;
- 6. Assess project cost-effectiveness by documenting achieved benefits and improvements compared to development costs; and
- 7. Determine whether subdivision changes could be cost effectively applied in whole or in part to other permit functions.

Goals/Objectives

Agency Contact: Dean Rude/Terry Lazure Phone Number: 444-4256/2855

Agency Name: Department of Environmental Quality

Division: Central Management

Program (identify and briefly describe): DP 1001 Business Process Improvement

List a single goal and brief description:

Consolidate multiple revenue/accounts receivable/billing/cash processes (RAR) into one uniform system with standardized and more efficient processes administered by the department's Office of Financial Services. Optimize the subdivision review process for efficiency, quality of service and timeliness by utilizing on-line, web-based technology while maintaining environmental protection standards.

Describe the performance measures related to this goal:

- Identify "as is" RAR processes and establish a timeline for completion of work flow documentation for each process within project scope. Evaluate and report effectiveness of new system implementation. Report progress to project owner as necessary to insure quality and schedule is maintained.
- Identify "as is" subdivision permitting processes and establish a timeline for completion of work flow documentation for each process within project scope. Evaluate and report effectiveness of process changes. Report progress to project owner as necessary to insure quality and schedule is maintained.

List significant milestones and target dates to be completed in the 2009 Biennium:

- Inventory existing RAR systems and document high level "as is" processes for all department programs by June 2008. Identify common RAR elements, process improvements, standard practices; complete design of uniform RAR system and create on-line, web-based payment processing and convert pilot process by early calendar year 2009. Implement uniform RAR system, including online, web-based payment processing for a couple more work units by FYE 2009.
- Identify improvements and determine the types of subdivisions that fit on-line application process by June 2008. Create and implement on-line application for selected types of subdivisions by FYE 2009.

Describe the current status of the measurements related to the goal:

We are on track, have established a project team, completed the business plan and project charter and distributed a process survey to all DEQ programs to inventory processes and gather preliminary RAR information. We have taken an initial high-level look at the subdivision application review business process as part of an ongoing, previously approved project. This information will be utilized as we go deeper into the major subdivision processes. Furthermore, information gathered as we finalize and go live with the small subdivision on-line application, (paper submittal) will be a major piece of developing this DP.
